ABSTRACT

The present invention relates to a substantially dry, disposable personal care article containing a substantially dry, disposable, multilayered personal care article suitable for cleansing, the article contains a water insoluble substrate containing a batting layer comprising a composite material; a nonwoven layer which is disposed adjacent to said batting layer; and a cleansing component disposed adjacent to said water insoluble substrate, wherein said component contains from about 10% to about 1000%, by weight of the water insoluble substrate, of a lathering surfactant. The present invention further relates to a substantially dry, disposable multilayered personal care article suitable for conditioning wherein the above-described article comprises a therapeutic benefit component, disposed adjacent to said water insoluble substrate, wherein said component comprises from about 10% to about 1000%, by weight of the water insoluble substrate, of a therapeutic benefit component in addition to or in lieu of the cleansing component.
